Mr. C. R. Cross,
Chairman of Sub-Committee on Research Funds,
Massachusetts Institute of Technology.

Dear Sir:

The chief research fund in the University of Toronto is the Medical Research Fund, constituted of gifts from various gentlemen to the amount of \$15,000. There is also a Surgical Research Fund of \$1000. I am sending you an outline of the work of the Medical Research Fund, which I think will explain itself.

In addition to these we are conducting in our Hygiene Laboratory the manufacture of biological by-products, diphtheritic and rabies antitoxins, and at present we are also manufacturing tetanic antitoxin for which the Dominion Government is making a grant of \$5,000. It is hoped that in connection with this laboratory research in Hygiene and Preventive Medicine will be conducted.

The other research that is done in the University is connected with the various laboratories, such as Physiology, Biochemistry, Anatomy, Physics, Geology, Chemistry, Biology, Botany and Mineralogy: in fact in all our scientific laboratories.

There is the well-known scholarship for scientific research granted by the Exhibition of 1851 Commissioners, and this Exhibition is awarded every second year. Its value is \$150 a year.

Yours sincerely,

President.
